

Laksandro Ramadhanu

Product Developer | Full-Stack JavaScript | Operations & Logistics

laksandror@gmail.com | LinkedIn | GitHub | iamsandro.my.id

PROFILE

Product Developer with a background in trucking operations, building software that people actually use in the field. At PT Melangkah Bersama Digital I build and develop every product end to end — from requirements and user flows to development, deployment and iteration — including a live marketplace and a WhatsApp & email blast platform. In parallel, as Operation Staff at a trucking company, I turn manual operational workflows into digital systems, from document automation to an order management and fleet monitoring platform. Experienced with Next.js, TypeScript, Node.js and Supabase, with a focus on secure-by-design systems that are simple to use for every user.

WORK EXPERIENCE

PT. Melangkah Bersama Digital — Sep 2026 – Present
Product Developer

- Build and develop all company products end to end: requirements, user flow design, development, deployment and continuous improvement.
- Lead development of **Langkaloka** (langkaloka.id), a live marketplace with seller panel and social feed; integrating payment gateway (VA, QRIS, e-wallet) and shipping & tracking API.
- Developing **MBD Messaging**, a WhatsApp & email blast platform on the official WhatsApp Business Platform for an enterprise client, with data security as a core requirement.
- Building **UMKM Order**, a WhatsApp-based ordering system for small businesses (food, catering, laundry) designed to be easy for users of all ages.
- Apply secure-by-design practices on money, order and stock flows: server-side validation, idempotent webhooks, rate limiting and per-endpoint authorization.

PT. Mandiri Trans Utama — Jun 2024 – Present
Operation Staff

- Manage and verify transportation documents (Delivery Order, Travel Plan, Dispatcher Checklist) to support daily trucking operations.
- Prepare billing documents based on delivery notes signed by shipper and consignee, and maintain document archives for invoicing.
- Coordinate with drivers and the dispatch team on document distribution, trip schedules and daily fleet operations.
- Built **FleetPulse**, an internal order management and control tower system (Next.js, Supabase) for order monitoring, HSE inspection, vehicle readiness, trip status and live GPS tracking.
- Developed an automated Logistics Database & Document Management System with Google Sheets and Apps Script, replacing a paper-based workflow with a centralized digital database.

PT. Creative Ocean Pictures — Jul 2023 – Dec 2023
Content Creator

- Planned, scripted, edited and published digital content.
- Researched consumer trends and built digital content strategies, producing engaging content for TikTok.
- Produced up to 8 pieces of content per day, reaching hundreds of thousands of viewers.

PT. Republik Teknologi Kreasi Negeri — Sep 2021 – Jul 2023
Technical Support

- Diagnosed and resolved network issues using technical tools to minimize downtime.
- Coordinated with the team to troubleshoot and restore network services.
- Collected and analyzed customer complaints into data reports to support better service quality.

PROJECTS

FleetPulse — Order Management & Fleet Monitoring Internal · Live
Next.js · TypeScript · Supabase · GPS Fleet API

- Booking flow with capacity check between Marketing and Operations, tracked in history to measure booking acceptance.
- Trip monitoring from loading to complete, live GPS map with units matched to devices by plate number.
- Safety alerts for overspeed, night driving and long driving hours; HSE inspection and vehicle readiness status.

Langkaloka — Marketplace Feb 2026 · Live
Next.js · TypeScript · Payment & Shipping API · langkaloka.id

- Seller store panel and Loka Feed home feed; adding payments (VA, QRIS, e-wallet), shipping and package tracking.
- Transparent service fee at checkout and auto-cancel with refund if a paid order is not processed within 24 hours.

MBD Messaging — WhatsApp & Email Blast Platform In development
Node.js · TypeScript · WhatsApp Business Platform

- Campaign dashboard with super-admin and operator roles, built for enterprise-scale messaging with security-first data handling.

UMKM Order — WhatsApp Ordering System Nov 2026 · In development
Next.js · TypeScript · Supabase

- One flexible ordering system for small businesses — food, catering, cakes, frozen food and laundry — where customers order from a store menu link shared via WhatsApp.
- Buyers pay the store directly (QRIS, bank transfer or cash on delivery); simple, large-button flows designed for users of all ages, with security as the top priority.

Kota Sandro — Interactive 3D Portfolio Nov 2026 · Live
Next.js · React Three Fiber · Zustand · Tailwind CSS · iamsandro.my.id

- Personal portfolio as a drivable 3D city with mini games, sticker progress, sound and a no-game quick view.

EDUCATION

Hacktiv8 Indonesia Dec 2023 – Mar 2024
Full Stack JavaScript (Bootcamp)

SMK Panjatek 2018 – 2021
Computer Network Engineering

CERTIFICATIONS

- Hacktiv8 — Full Stack JavaScript Bootcamp
- Kelas.com — Mahir Microsoft Office A–Z (Sep 2025)

SKILLS

Development: JavaScript, TypeScript, React, Next.js, Node.js, Tailwind CSS, HTML, CSS, SQL

Backend & Data: Supabase, PostgreSQL, REST API, Webhooks, Auth & Row Level Security

Integrations: Payment Gateway (VA, QRIS, e-wallet), Shipping & Tracking API, GPS Fleet API, WhatsApp Business Platform, Google Apps Script

Tools & Deployment: Git & GitHub, Vercel, Domain & DNS, cPanel

Operations & Logistics: Fleet & Dispatch Coordination, Document Control, Billing Administration, Operational Reporting, Process Improvement

Productivity: Microsoft Excel, Google Sheets, Microsoft Office, Data Management
